SUMMARY

Full-stack software engineer across the JavaScript / TypeScript ecosystem — React, Vue and Next.js on the front end, Node.js and Express on the back end — combined with hands-on AI / LLM development and cloud infrastructure.

Ships end-to-end: a commercial multi-agent AI orchestration platform, SaaS products, Kubernetes / AWS deployments and Android apps. Owns products solo, with scalability and clean architecture as first-order priorities.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), C#, Python, Kotlin, SQL, HTML5, CSS3 / SASS, Bash
Frontend	React.js, Next.js (App Router, React Server Components), Vue.js, Redux, Tailwind CSS, shadcn/ui, responsive design, accessibility (a11y)
Backend	Node.js, Express, REST API design, PostgreSQL, Supabase, authentication (JWT), job queues, server-side rendering
AI / LLM	LLM APIs (OpenAI, Anthropic), AI code generation, prompt engineering, multi-agent orchestration, RAG, embeddings, model training & evaluation
Cloud / DevOps	Amazon Web Services (AWS), Kubernetes, Docker, Linux system administration, CI/CD, Vercel, Railway, self-hosted infrastructure (Cloudflare Tunnel, Dokploy, self-hosted Supabase, Traefik), monitoring & observability (Prometheus / Grafana / Loki)
Mobile	Android development (Kotlin, Jetpack Compose, MVVM)
Testing & Tools	Playwright, performance testing, Git, GitHub, monorepo (Turborepo), Agile, scalable architecture

EXPERIENCE

Software Engineer & AI Solutions Developer

Apr 2025 – Present

Cloudinfrastructure · Prague, Czechia (Hybrid)

- Build AI-driven solutions with a focus on AI code generation and applied AI for the construction industry.
- Manage cloud infrastructure and deployments using Kubernetes and AWS.
- Develop and maintain Android applications and administer Linux-based systems.

AI Training & Software Developer

Mar 2025 – Dec 2025

Outlier · Remote

- Contributed to the development and training of AI models, improving overall software capabilities.

Freelance Software Developer

Oct 2023 – Apr 2025

Self-employed · Prague, Czechia (Remote)

- Designed and implemented full-stack web applications for a range of clients.
- Ran requirement analysis and client communication to deliver tailored solutions that met client expectations.
- Used agile methodologies and version control to streamline project management and ensure timely delivery.

Junior Frontend Developer

Apr 2023 – Sep 2023

DENEVY · Prague, Czechia · Part-time

- Developed and maintained front-end architecture using TypeScript and modern front-end practices.

Frontend Developer

Apr 2023 – Sep 2023

juno.one · Prague, Czechia · Part-time

- Focused on front-end development and feature implementation using TypeScript.

Robotics Instructor

Sep 2022 – Jun 2023

Dům dětí a mládeže Stodůlky · Prague, Czechia

- Taught the basics of programming and robotics to children, developing clear communication and mentoring skills.

PROJECTS

- **Ripieno** — Commercial multi-agent AI orchestration platform with an autonomous pipeline that generates working full-stack apps; built an evaluation harness, per-role model selection, and budget controls. *TypeScript, Next.js, Supabase / PostgreSQL, LLM APIs, Railway, Vercel*
<https://www.ripieno.xyz>
- **Homelab** — Self-hosted production infrastructure on a single Lenovo ThinkCentre M920q mini-PC (i7-9700T, 32 GB RAM, 1 TB NVMe) that replaced Vercel, Supabase Cloud, Railway, and Resend; runs real SaaS (Freio, Ripieno, the Lokwave family, GorillaType, Classio, this portfolio) behind a Cloudflare Tunnel with Dokploy, per-app self-hosted Supabase, own SMTP, full observability (Prometheus / Grafana / Loki / Uptime Kuma), LLM self-healing agents, and

encrypted off-site backups with weekly restore drills. *Docker, Dokploy, Cloudflare Tunnel, Self-hosted Supabase, Traefik, Prometheus / Grafana / Loki, systemd*
<https://github.com/DanilaAnikin/homelab>

- **Perennial** — Autonomous multi-agent software factory that turns a one-line wish into merged code: a manager writes the spec, an architect emits a dependency DAG, parallel workers build each task in its own git worktree, and a judge plus an end-to-end tester gate the result before it opens a pull request. 41,377 agent attempts across 7 repositories for \$44 total, held there by layered per-attempt, per-project and monthly spend caps. *TypeScript, Next.js, Turborepo, Drizzle, PostgreSQL, pgmq, LiteLLM, Docker, Octokit, systemd*
<https://farm.anikin.cz> · github.com/DanilaAnikin/agent-farm
- **Frem** — Self-hosted pipeline taking a video from script to published YouTube upload: LLM-written scripts, narration with word-level timestamps, generated imagery placed against those timestamps, ffmpeg render on the server's integrated GPU, then scheduled upload via the YouTube Data API. Produced 277 published videos and 60,576 views. *TypeScript, Next.js, Python, ffmpeg / VAAPI, PostgreSQL, Docker, ElevenLabs API, YouTube Data API*
<https://youtube.com/@fremmmm>
- **Mimic** — Copy-trading platform mirroring a followed trader's positions onto each user's own exchange account: one detection worker polls every watched portfolio once for the whole platform and fans trades out per follower, with encrypted agent keys and per-user isolation so one failure never stalls anyone else. Web app plus native Android and iOS clients. *Next.js, React, TypeScript, Drizzle, PostgreSQL, Kotlin, SwiftUI, Docker*
<https://mimic.anikin.cz>
- **Faktura** — Czech-compliant invoicing system with immutable issued documents, number series, VAT regimes, advance and tax-payment documents, ČNB exchange rates and CZ/EN PDF output carrying SPAYD and EPC payment QR codes. 261 tests plus a browser smoke run against a real database; separate PDF and job workers, automated backup and restore-drill timers. *Python, Django 5.2, PostgreSQL 17, WeasyPrint, Unicorn, pytest, Playwright, Docker, Dokploy*
<https://faktura.anikin.cz>
- **Remote Terminal** — Browser-based multi-terminal workspace for a home server: real PTYs over a binary WebSocket, tmux-backed sessions that survive app restarts, split panes, session recording with full-text search, and drag-and-drop file transfer. Passkeys, TOTP, role-based accounts and expiring read-only share links; bound to loopback and published behind an identity proxy. *TypeScript, Node.js, Express, WebSocket, node-pty, xterm.js, React, Vite, tmux, Cloudflare Access*
- **Outreach agent** — Autonomous cold-outreach and inbound-reply agent running unattended: it discovers local businesses, generates a per-brand audit, writes each message with an LLM and sends it through my own mail service under hard daily caps. 1,110 emails across six brands since July 2026, with threaded follow-ups, unsubscribe handling and escalation to a human. *Python, PostgreSQL, systemd, Anthropic API, IMAP / SMTP, self-hosted ESP*
- **Mail agent** — Sandboxed inbound-mail agent watching 15 mailboxes: each message gets its own headless LLM session with no built-in tools, reaching only that thread through a token-scoped MCP server, while the send / ignore / escalate decision is made in code behind a policy gate. Proposed replies land in Telegram, where I approve, edit or reject them. *TypeScript, Node.js, MCP, SQLite, Zod, Docker (read-only root), Telegram Bot API*
- **Jarvis** — Hands-free personal AI agent for Linux: a wake-word voice loop with speech-to-text and streaming speech output, MCP tool servers for shell, browser, filesystem and desktop control, persistent memory, and a safety layer classifying every tool call before it runs. *TypeScript, Node.js, Claude Agent SDK, MCP, Zod, Whisper STT, Playwright*
<https://github.com/DanilaAnikin/jarvis>
- **Freio** — Exam-prep platform for Czech university entrance tests (SCIO / NSZ): 7 subjects, 1,400 tests and 63,600 questions, timed mock exams with server-side scoring, plus classrooms, school and company licences, and an iOS app. Covered by 396 test files (Playwright + Vitest). *TypeScript, Next.js, PostgreSQL, Playwright, Vitest, Expo, shadcn/ui*
<https://www.freio.cz>
- **Classio** — School information system for Czech schools (a Bakalář alternative covering everything except the state register): timetables, grades, attendance and communication, delivered as a web app plus native iOS and Android clients, with data hosted in the Czech Republic. *TypeScript, Next.js, PostgreSQL, Flutter, Docker*
<https://www.classio.cz>
- **LaunchHub** — Internal control plane for running my own products: a web app, background worker, CLI and MCP server over one shared core, used to provision and operate apps on the homelab. *Next.js, Hono, Drizzle, Turborepo, Docker*
- **Daylink** — Android voice assistant built offline-first with background sync, keeping API tokens in hardware-backed storage via the Android Keystore (secondary-school thesis project). *Kotlin, Jetpack Compose, MVVM*
https://github.com/DanilaAnikin/Daylink_android_app

EDUCATION

University of Economics, Prague (VŠE)

Sep 2026 – Present

BSc Applied Informatics · Faculty of Informatics and Statistics

Gymnázium Christiana Dopplera

Sep 2023 – Jun 2026

Mathematics and Computer Science · Prague, Czechia

- Foundational and advanced study of mathematics, computer science, and C# programming.
